

B&M Waste Services: diverting waste from landfill

Since February 2013, we have been sending your waste to be turned into Refuse Derived Fuel (RDF).

Steam to power heating systems

Energy

We opened our own facility in June 2014. This means that we are able to send less waste to landfill than ever before.

We have now diverted 25,000 tonnes of waste from landfill to RDF

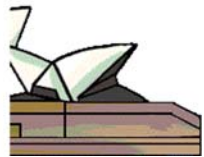

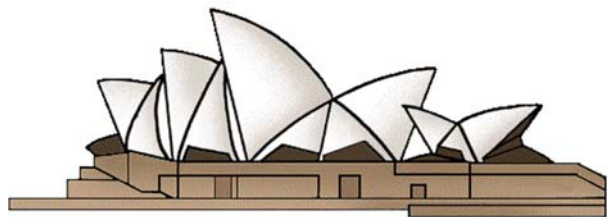

That's the same weight as 2.4 Eiffel Towers!

Plus, with a volume of 35,000m³, this amount of waste could fill Big Ben 7.5 times...

...and the Sydney Opera House Concert Hall 1.3 times!

With a goal of zero to landfill, B&M Waste Services invest in the latest technologies to ensure that we recycle as much of your waste as possible.
